Telehealth Continues to Grow!

ACDs increasingly turn to remote patient monitoring

"Most of the hospitals and health systems interviewed are at various stages in the process of deploying ACDs. Fifty-five percent of them said they had deployed or are evaluating remote monitoring technology to reduce readmissions, to obtain financial incentives related to chronic disease management and care coordination, to increase self-management of disease."

The Questions?

- Why aren’t we growing
- Who is seeing all the growth
- Is healthcare really changing
- Am I ready to change
The Challenges
Telehealth life-cycle
